

Johann (Johnny) & Sandra Peham

Ask Nature! The answer is much simpler than you can ever imagine!

For centuries, human beings have interfered in the natural rhythms of nature.

They have cut down forests, have canalised waters and have used chemicals to advance plant growth. Deserts and steppes have emerged and entire areas and their population run out of water. All of this has happened and is still happening under the pretext of progress and the assumption of creating more wealth and happiness for humans.

The last years and decades, characterised by famines, pandemic diseases and natural disasters, showed us that the ways we took, were not the right ones. So people began to rethink and more and more, independent of their origin, feel that we have to live with instead of against nature, in order to enjoy health, peace and freedom.

But how can we, who left all these deep wounds, enable the nature to heal itself? Is a change for the better possible after all? And what would all of us need to do to make our world green and therewith eatable again?

I am delighted to tell you that our situation is not hopeless. Quite the contrary, there is a way to heal the earth. This way is the restoration of a natural water cycle which will enable all life on our beautiful planet.

The restoration of a natural water cycle will provide access to fresh and clean water, as well as to healthy and delicious fruit and vegetables, for everyone, no matter in which country. Through renaturation of landscapes and entire areas, we will create together new ecological paradises for humans, animals and plants.

The Austrian, Sepp Holzer, is a true pioneer regarding the creation of a natural water household. His Holzer'sche agro ecology and permaculture make it possible to turn deserts into paradises. This is not an utopian dream! Sepp Holzer and his team made miracles come true in nearly every corner of the world and under the most different geographical, geological and climatic conditions.

This is what we, members of the association PermaVitae and close collaborators of Sepp Holzer in his international projects, want to tell at the conference "Freedom our Responsibility" 2014. We would like to show all participants some possible ways to create new and wonderful habitats for humans, animals and plants, through the targeted construction of water retention basins.
